

College Student

Bibi is a lecturer who manages a student database at a university. Before Bibi existed, the student database was not well organized, and was not collected per student, so students' data could be chopped up and scattered irregularly between one another.

Because Bibi is a lecturer who has studied "struct", Bibi wants to store all the data given in the struct. Making it easier to find and reuse.

You are encouraged to use the struct method to solve this problem to make it easier to store data.

Data from students can contain:

- Name (Nama)
- NIM
- Age (Umur)
- Postal Code (Kode Pos)
- Place of Birth (Tempat Lahir)
- Date of Birth (Tanggal Lahir)
- High School (Almamater SMA)
- Number of Siblings (Jumlah Saudara Kandung)
- Height (Tinggi Badan)
- Bank Account Number (NOMOR REKENING)

Format Input

The input in the first row contains an integer N, how much student data you have to save. For the next $N \times 10$ rows of student data you must save sequentially from the Name until Account Number

Format Output

The output consists of $(N \times 10) + N$ lines. Student data is preceded by "Mahasiswa ke-X:", where X is the order of students.

Constraints

- 1 < N < 100
- $1 \le |Name| \le 100$
- \bullet |NIM| = 9
- $1 \le Age \le 100$
- \bullet |PostalCode| = 6
- $1 \le |PlaceOfBirth| \le 100$
- $1 \le |DateOfBirth| \le 100$
- $1 \le |HighSchool| \le 100$
- $1 \le Number of Siblings \le 100$
- $1 \le Height \le 1000$
- |BankAccountNumber| = 9

College Student

Bibi adalah seorang dosen yang mengurus database mahasiswa pada sebuah universitas. Sebelum ada Bibi, database mahasiswa tidak tersusun dengan baik, dan tidak dikumpulkan per mahasiswa, sehingga data para mahasiswa dapat tercacah dan tersebar tidak teratur antara satu dan yang lainnya.

Karena Bibi adalah seorang dosen yang sudah mempelajari "struct", maka Bibi ingin menyimpan semua data yang diberikan dalam struct. Sehingga memudahkan untuk dicari dan digunakan kembali.

Anda diharapkan untuk menggunakan metode struct dalam menyelesaikan permasalahan ini untuk mempermudah anda dalam penyimpanan data.

Data dari mahasiswa dapat mengandung:

- Nama
- NIM
- Umur
- Kode Pos
- Tempat Lahir
- Tanggal Lahir
- Almamater SMA
- Jumlah Saudara kandung
- Tinggi Badan
- Nomor Rekening

Format Input

Input pada baris pertama berisi sebuah $integer\ N$, banyaknya data mahasiswa yang harus anda simpan. Untuk $N\times 10$ baris berikutnya terdiri dari data mahasiswa yang harus anda simpan berurutan dari Nama hingga Nomor Rekening.

Any other reproduction in any form without the permission of School of Computer Science - BINUS is probibited. Violators of this clause may be academically sanctioned.

Format Output

Output terdiri dari $(N \times 10) + N$ baris. Data mahasiswa didahului oleh "Mahasiswa ke-X:", dimana X merupakan nomor urutan mahasiswa.

Constraints

- $1 \le N \le 100$
- $1 \le |Nama| \le 100$
- \bullet |NIM| = 9
- $1 \leq Umur \leq 100$
- |KodePos| = 6
- $1 \le |TempatLahir| \le 100$
- $1 \le |TanggalLahir| \le 100$
- $1 \le |AlmamaterSMA| \le 100$
- $1 \le Jumlah Saudara Kandung \le 100$
- $1 \le TinggiBadan \le 1000$
- |NomorRekening| = 9
